CC 101 – Introduction to Computing

Laboratory Worksheet No. 1 | Week 3: Computer Components I – Hardware (CO2)

"Know Your Machine": Exploring the Computer Unit You Are Using

Name: Yreignoa H. Navarro **Section:**

Computer Unit Used (Desktop/Laptop, brand): **Date:** September 19 2026

I. Objectives

At the end of this activity, you should be able to:

- Identify the major hardware components of the computer unit you are using and describe the function of each.
- Use built-in Windows 11 tools to inspect and record your computer's technical specifications.
- Distinguish between input, output, processing, and storage devices on an actual working computer.
- Document your exploration accurately and reflect on what you learned.

II. Materials Needed

- A computer unit running Windows 11 (school laboratory PC or personal laptop/desktop)
- This worksheet (printed copy, or the digital file to fill out and submit)
- Optional: smartphone camera, to photograph the physical unit and ports for your own reference

III. Background

Every computer, whether a desktop tower or a laptop, is built from hardware components that fall into four general categories: input devices (send data into the computer, e.g., keyboard, mouse), output devices (present processed data to the user, e.g., monitor, speakers), the processing/storage unit (CPU, RAM, and drives that compute and hold data), and ports/peripherals (connectors that link external devices to the system unit). Windows 11 also provides several built-in tools — Settings, System Information, Device Manager, and Task Manager — that let you inspect these components without opening the case. This activity uses both direct observation and these software tools.

IV. Procedure

Part A – Physical Inspection (5–10 minutes)

1. Examine the computer unit in front of you. If it is a desktop, look at the system unit (tower/case); if it is a laptop, examine the whole chassis.
2. List all the input devices you can see or that are built in (e.g., keyboard, mouse, touchpad, webcam, microphone).
3. List all the output devices you can see or that are built in (e.g., monitor/screen, speakers, headphone jack).
4. Locate the available ports on the unit (USB-A, USB-C, HDMI, audio jack, Ethernet/LAN, power, etc.) and note what each one is typically used to connect.

Part B – System Identification (Settings)

5. Click Start → Settings → System → About.
6. Record the Device name, Processor, Installed RAM, Device ID, and System type shown under Device

specifications.

7. Scroll down to Windows specifications and record the Edition, Version, and OS build.

Part C – Detailed Hardware Check (System Information)

8. Press the Windows key, type System Information, and open it (this runs the msinfo32 tool).
9. On the System Summary page, record the System Manufacturer, System Model, BIOS Version/Date, and Total Physical Memory.

Part D – Device Manager Exploration

10. Right-click the Start button and choose Device Manager.
11. Expand at least six (6) categories — for example: Display adapters, Network adapters, Sound/video/game controllers, Disk drives, Keyboards, Mice and other pointing devices, and Universal Serial Bus controllers.
12. For each category you expand, write down the specific device name Windows lists (this is the exact model of that component in your unit).

Part E – Performance and Storage Check (Task Manager)

13. Open Task Manager (Ctrl + Shift + Esc) and click the Performance tab.
14. Record the CPU name, base speed, and number of cores; the total Memory (RAM) and its speed; and the Disk type (HDD or SSD) and capacity.

Part F – Software Snapshot (Optional / Bonus)

15. Go to Settings → Apps → Installed apps. List five (5) installed applications and classify each as System Software or Application Software.

V. Data and Findings

Table 1. System Identification Summary (Parts B & C)

Item	Your Findings
Device name	Le-202411291158
Processor	Intel(R) Celeron(R) CPU N3350 @ 1.10GHz
Installed RAM	4.00 GB (3.88 GB usable)
Device ID	14A69C17-4ED0-42DE-94C9-45B32D97D0FB
System type (32-bit / 64-bit)	64-bit Operating System, x64-based processor
Windows edition	Windows 10 Enterprise LTSC
Windows version	1809
OS build	17763.107
System manufacturer	Lenovo

Item	Your Findings
System model	not shown
BIOS version / date	not shown
Total physical memory	4.00 GB

Table 2. Physical Components Observed (Part A)

Component Observed	Type (Input/Output/Storage/Processing/Port)	Description / Observation
Keyboard	Input	Used to type letters, numbers, and commands into the computer.
Touchpad	Input	Used to move the cursor and select items on the screen.
Display/Screen	Output	Displays text, images, videos, and other information.
Webcam	Input	Captures images and video for video calls and other applications.
Speakers	Output	Produces sound from the computer.
USB Port	Port	Used to connect external devices such as a mouse, keyboard, or flash drive.
Headphone/Audio Port	Port	Used to connect headphones or other audio devices.
Charger/Power Port	Port	Used to connect the power adapter and charge the laptop.
SSD/Storage	Storage	Stores the Windows operating system, applications, and personal files.
RAM	Processing/Memory	Temporarily holds data and programs while the computer is running.

Table 3. Device Manager Findings (Part D)

Device Manager Category	Specific Device Name Listed
Display adapters	Intel(R) HD Graphics 500

Device Manager Category	Specific Device Name Listed
Network adapters	Bluetooth Device (Personal Area Network) #3 Intel(R) Dual Band Wireless-AC 7265 #3 WAN Miniport (IKEv2) WAN Miniport (IP) WAN Miniport (IPv6) WAN Miniport (L2TP) WAN Miniport (Network Monitor) WAN Miniport (PPPOE) WAN Miniport (PPTP) WAN Miniport (SSTP)
Sound, video and game controllers	BT SPEAKER Stereo CoolStar SST Audio (WDM) Dialog Semiconductor 7219 Codec High Definition Audio Device K12 Hands-Free K12 Stereo
Disk drives	Generic MMC32G
Keyboards	Chromebook Keyboard HID Keyboard Device
Mice and other pointing devices	HID-compliant mouse
Universal Serial Bus controllers	Intel(R) USB 3.0 eXtensible Host Controller-1. 0 (Microsoft) USB Composite Device USB Root Hub (USB 3.0)

Table 4. Software Snapshot (Part F, Optional / Bonus)

Installed Application	Classification (System / Application Software)
Microsoft Edge	Application Software
Notepad	Application Software
Windows Security	System Software

Installed Application	Classification (System / Application Software)
File Explorer	System Software
Control Panel	System Software

VI. Realization (Reflection)

In two to four sentences each, answer the following in your own words.

1. What did you discover about your own computer unit that you did not know before doing this activity?

I discovered that my laptop has 4 GB of RAM and uses an Intel Celeron N3350 processor. I also learned how to check my computer's system information, Windows version, and hardware specifications. This helped me understand my laptop better.

2. Which hardware component do you think matters most to how your computer performs, and why?

I think the RAM is one of the most important components because it affects how many programs the computer can handle at the same time. Having more RAM can help the computer run multiple applications more smoothly especially when you have so much works or files to save in your laptop.

3. How might knowing your computer's hardware and software specifications help you as a future IT/CS professional?

The knowledge of hardware and software specifications can be useful in some way, for example, understanding how computers work, and being able to fix them if needed. Being an IT/CS professional, that information might be helpful when deciding what programs to use or not use, what computer to buy, and how to maintain it.

4. What difficulties, if any, did you encounter while completing this activity, and how did you resolve them?

I had a problem with locating my specific devices in Device Manager since there were a lot of various devices and I got confused by the labels. How did you solve this issue? Well, I double-checked every category by expanding it and looking for the specific name of the device. Eventually, I managed to find the necessary information for the activity.

VII. Scoring Guide

Criteria	Description	Points
Completeness	All tables (1–4) and required fields are filled out.	30
Accuracy	Recorded specifications and device names match what the tools actually show.	30
